Forecast for Wednesday 19 May 2021

Weather: Rather cloudy with a few outbreaks of drizzle possible during the early hours, these mainly across the south of the Beacons. The cloud will break and lift quickly after sunrise, allowing a few isolated showers to develop. These will be mainly light, although the odd heavy one is possible in the east by midday with a small risk of hail and thunder. During the afternoon these showers will fade away leaving a fine, dry end to the day with some late sunshine..

Chance of cloud free mountain/hill tops above 800m: 70% initially, improving to 90% or better by mid-morning.

Visibility: Locally poor on summits with cloud down to around 300m before breaking and lifting. Becoming very good with excellent clarity, but some sudden brief deteriorations are likely in any heavier showers, with cloud down to 900-1000m.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

There is still a risk of isolated heavy and thundery showers through the middle of the day, so best pack waterproofs. Sunlight will be strong in between showers and later in the afternoon, and sun protection is advised.

Forecast for Thursday 20 May 2021

Weather: Dry but increasingly cloudy during the early hours, with outbreaks of rain spreading from the southwest shortly after dawn. Rain will continue through the morning and afternoon, heavy at times and accompanied by gale force winds. There may be some brief drier interludes during the afternoon, but persistent rain will develop by evening.

Maximum wind: South or southwesterly 45-50mph gust 60-65mph.

Chance of cloud free mountain/hill tops above 800m: 90% at first falling to 40% as the rain arrives with the best of any breaks in sheltered northeastern areas. Deteriorating further to 10% or less in the evening.

Visibility: Good at first with only patchy cloud on slopes above 700m. Deteriorating to moderate at low levels as the rain arrives with cross valley views appearing mist. Low cloud will become more extensive at the same time, with areas lowering to cover many south and southwestern facing slopes above 500-700m, with the best of any breaks in the sheltered northeastern side of the Snowdon range. Cloud will lower to cover many slopes above 400m in the evening.

Temperature: **Valleys:** Plus 5 Celsius becoming Plus 11 Celsius.
At 800m: Plus 3 Celsius becoming Plus 6 Celsius.
Freezing level: Above the summits.
